PS Claim 1: Page 88; 91pp; English.

CC The present invention provides the protein and coding sequences of  
 CC anti-CD40 antibodies. These can be used in the treatment of cancer and  
 CC inflammatory and immune system diseases, including systemic lupus  
 CC erythematosus, scleroderma, inflammatory myositis, Sjogren's syndrome,  
 CC mixed connective tissue disease, rheumatoid arthritis, multiple  
 CC sclerosis, inflammatory bowel disease, acute respiratory distress  
 CC syndrome, pulmonary inflammation, osteoporosis, delayed type  
 CC hypersensitivity, asthma, primary biliary cirrhosis and idiopathic  
 CC thrombocytopenic purpura.

XX Novel antibodies and compounds capable of binding to human  
 PT interleukin-18 useful for treating, e.g., inflammatory disorders,  
 PT neurological disorders, heart failure, myocardial infarction, and  
 PT autoimmune diseases -

PS Claim 25; Page 37; 91pp; English.

CC The invention provides isolated antibodies, or antigen-binding portions,  
 CC that are capable of binding to human interleukin-18 (IL-18). The  
 CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
 CC disorder where IL-18 is detrimental in, a human subject suffering from,  
 CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
 CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
 CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease,  
 CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
 CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
 CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18

CC antibody may occur before, concurrent, or after administration of a  
 CC second agent selected from an antibody, or fragment, capable of binding  
 CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
 CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
 CC agents. The present sequence represents an anti-IL-18 antibody 2E1 heavy  
 CC chain CDR1 fragment.

XX Novel anti-prostate stem cell antigen (PSCA) antibody that internalizes  
PT on binding to PSCA on mammalian cell and inhibits growth of  
PT PSCA-expressing cancer cells in vivo, useful for killing  
PT PSCA-expressing cancer cells -

XX Claim 22; Fig 12; 112pp; English.

XX The present sequence is murine prostate stem cell antigen (PSCA)  
CC antibody (Ab) heavy chain variable region domain (VH) from hybridoma  
CC clone 6B8.1D7.2B3, Asc# 2761. PSCA is a single subunit glycoprotein that  
CC is expressed on the cell surface as a glycosylphosphatidylinositol (GPI)-  
CC anchored protein. The present invention relates to anti-PSCA antibody  
CC composition and methods of killing PSCA-expressing cancer cells. PSCA is  
CC useful for inhibiting and killing the growth of PSCA-expressing cancer  
CC cells such as prostate cancer, bladder cancer or lung cancer cells.  
CC Humanised antibody conjugated to a toxin or a radioactive isotope is used  
CC for killing the cancer cells. PSCA is useful for specifically targeting  
CC PSCA-expressing tumour cells in vivo and for inhibiting or killing these  
CC cells. The antibodies are also useful for treating the above mentioned  
CC cancers and for diagnosing and staging of PSCA-expressing cancer, for  
CC purification or immunoprecipitation of PSCA from cells, and for detection  
CC and quantitation of PSCA in vitro. PSCA DNA is also useful for treating  
CC cancers by gene therapy techniques.

XX Panel of specific binding members of antibody molecules which bind to  
PT whole adipocytes is used in the treatment of obesity and obesity  
PT related diseases -

XX Claim 1; Page 147; 182pp; English.

XX AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid  
CC sequences of anti-adipocyte monoclonal antibody heavy chain, light  
CC chain, and heavy chain complementarity determining regions (CDR) of the  
CC invention. The antibodies can be used in the treatment of obesity and  
CC obesity related diseases. The antibodies can be used to deliver drugs or  
CC pro-drugs directly to the fat mass of an obese patient or the antibody  
CC can be used as a therapeutic itself. Antibodies binding specifically to  
CC adipocytes can be used to activate the immune system to destroy the cells  
CC by complement mediated lysis. The antibodies may be labeled with a  
CC detectable label such as radiolabel, fluorescent or chemical group and  
CC used in methods of diagnosis in human subjects e.g. to determine the  
CC presence of adipocyte antigen on the surface of an adipocyte to detect or  
CC determine the presence or level of adipocytes in a cell or tissue sample.  
CC The antibodies can be used as an alternative means of treatment for obese  
CC patients other than undergoing surgery to remove excess fat. Antibodies  
CC for different types of fat deposits can also be produced e.g. intra-  
CC abdominal fat associated with heart disease.

 PT New polypeptide(s) which bind heavy metals, esp. mercury - derived from  
 PT monoclonal antibodies, used for detecting, removing, adding or  
 PT neutralising heavy metals  
 XX  
 PS Claim 13: Page 58; 106pp; English.

CC Hybridoma antibodies have been produced with the spleen cells of  
 CC BALB/c mouse that had received multiple injections of mercuric ions  
 CC reacted with glutathione to produce a mercuric ion coordinate  
 CC covalent compound which was covalently bound to keyhole limpet  
 CC hemocyanin (KLH). Eight hybridomas (1F10, 4A10, 1C11, 5G4, 23F8, 2D5,  
 CC 5B6 and 3E8) were producing MABs that were strongly positive  
 CC against glutathione-mercuric ions but negative against glutathione  
 CC without mercuric ions. RNA was isolated from hybridoma cells with  
 CC guanidine isothiocyanate. First strand cDNA synthesis was catalysed  
 CC by MolV reverse transcriptase. The primers used for cDNA synthesis  
 CC were complementary to the 5' end of the CH1 domain of the heavy  
 CC chain expressed by the hybridoma of interest, or to the 5' end of  
 CC the C kappa domain. Some of the primers used for cDNA synthesis are  
 CC shown in AA097511-097518. The primer used for cDNA synthesis of the  
 CC variable region of a particular antibody polypeptide was also used  
 CC for PCR amplification of that variable region, in conjunction with  
 CC an appropriate V-region primer. In addition, the VH primer AA097518  
 CC was used to amplify the mab 2D5 and 5B6 heavy chains. The sequences  
 CC of the PCR amplified nucleotides were determined. These are given  
 CC in AA097498-097510 and the deduced AA sequences in AAR79241-R79250 &  
 CC AAR78970-R78971. The descriptions of the SEQ ID nos given on pp 44-45  
 CC and in the claims are different from the descriptions in the  
 CC sequence listings. The descriptions in the sequence listings are  
 XX used here.

 PT DNA fragment comprising human immunoglobulin Vh genes - for the  
 production of human immunoglobulin in mammalian hosts  
 PS  
 XX Disclosure; Page 32-33; 130pp; Japanese.  
 CC  
 CC Protein sequences (AA66295-51) are novel human immunoglobulin heavy  
 chain sequences encoded by novel isolated genes. The genes  
 CC (AA078939-79002) were isolated and cloned from a series of cosmid  
 CC constructs: Y202; Y103; Y21; Y6; Y24; 3-31; M84; M18 and M31, by PCR  
 CC amplification using primers AAO78917-38. The genes are subdivided into 5  
 CC families of Vh genes. The fragments cover a region of 800 kb. The DNA  
 CC fragments were isolated from high molecular weight DNA from human  
 CC placenta. The DNA was partially digested with TaqI restriction enzyme.  
 CC The fragments were separated by gel electrophoresis and 35-45 kb fractions  
 CC were collected. The fragments were ligated with ClaI-digested cosmid  
 CC vector pIB81. The ligation products were then subcloned by colony  
 CC into E.coli 490A. The fragments were then subcloned by colony  
 CC hybridisation. The Vh genes and the DNA fragments encoding them are  
 CC useful in producing human immunoglobulin in mammalian hosts.

 PT Inhibition of T-cell mediated immune response with anti-CD2

PT monoclonal antibody LO-CD2a - used for preventing transplant

PT rejection or for treating graft-versus-host disease or auto-immune

PT diseases  
 XX  
 PS Example 7; Fig 33; 96pp; English.

CC This represents the amino acid sequence of the light chain variable  
 CC region of human antibody clone Amu 5-3. This is used to construct a  
 CC humanised antibody LO-CD2a. The invention relates to the use of the  
 CC monoclonal antibody (Mab) LO-CD2a or a humanised or a chimeric version  
 CC of the LO-CD2a antibody for the inhibition of a T-cell mediated immune  
 CC response in a patient. The Mab LO-CD2a (produced by hybridoma cell line  
 CC ATCC HB 11423) can bind to an epitope on the CD2 antigen of the human  
 CC lymphocytes. The T-cell mediated immune response in a patient can be  
 CC inhibited by administering the Mab LO-CD2a or an antibody that binds to  
 CC the same human lymphocyte epitope as LO-CD2a. The method is used for  
 CC preventing transplant rejection or for treating graft-versus host  
 CC disease or for treating autoimmune diseases.

XX  
 PS Claim 5; Page 11; 15pp; Japanese.

CC This invention describes a novel antibody specifically recognizing  
 CC phosphatidylinositol-3,4,5-triphosphate (PIP3). The antibody of the  
 CC invention is used in immunogenic compositions in which a dead  
 CC Salmonella genus microbe is used as an adjuvant and mixed with PIP3. The  
 CC antibody can be used in an immunoassay containing a step in which the  
 CC above antibody or its variable region is reacted with PIP3 present in a  
 CC sample and the bond based on their immunological reaction. The method  
 CC can determine PIP3 easily in a high sensitivity. This sequence represents  
 CC the murine PIP3 recognizing monoclonal antibody variable region heavy  
 CC chain described in the method of the invention.

Anticancer human monoclonal antibody variable region sequences - and  
related DNA and RNA

Claim 3; Page 10; 14pp; Japanese.

The present sequence is a human anti-tumour antigen  
monoclonal antibody (Mab) heavy chain variable region, useful in  
medicine, pharmacology and biochemistry. The isotype of a Mab  
secreted by the human/human hybridoma HT was determined to be mu  
and kappa. Human Mab was purified, and the antigen recognised by  
human Mab CLN-1gm identified by western blotting.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX  
CC The invention provides isolated antibodies, or antigen-binding portions,  
CC that are capable of binding to human interleukin-18 (IL-18). The  
CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
CC disorder where IL-18 is detrimental in, a human subject suffering from,  
CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
CC antibody may occur before, concurrent, or after administration of a  
CC second agent selected from an antibody, or fragment, capable of binding  
CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
CC agents. The present sequence represents an anti-IL-18 antibody 2E1 heavy  
CC chain CDR2 fragment.

Novel antibodies and compounds capable of binding to human interleukin-18 useful for treating, e.g., inflammatory disorders, neurological disorders, heart failure, myocardial infarction, and autoimmune diseases -

Claim 29; Page 76; 91pp; English.

The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such

as autoimmune hepatitis and autoimmune neutropenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody variable region fragment.

Novel antibodies and compounds capable of binding to human interleukin-18 useful for treating, e.g., inflammatory disorders, neurological disorders, heart failure, myocardial infarction, and autoimmune diseases -

Claim 29; Page 76; 91pp; English.

The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,

CC Cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
 CC agents. The present sequence represents an anti-IL-18 antibody variable  
 CC region fragment.

Claim 2; Fig 1; 61pp; English.

Hepatitis B virus (HBV) is responsible for hepatitis infection in  
 humans, which may progress to liver cirrhosis or cancer. One of HBV's  
 surface antigens is pre-S1. Monoclonal antibodies specific for pre-S1  
 antigen may efficiently neutralise HBV. The present invention relates to  
 humanised antibodies specific for HBV surface antigen pre-S1. The  
 humanised antibodies are useful for preventing HBV infection and for  
 treating chronic hepatitis B. The Complementarity Determining Regions of  
 mouse pre-S1 antibody KR127 were grafted onto human antibody to produce  
 the humanised antibodies of the present invention. The present sequence  
 is the humanised pre-S1 antibody HKR127HC(I) heavy chain variable region  
 (VH). The coding sequence for the present sequence was produced from the  
 coding sequence of the mouse pre-S1 antibody VH sequence (AAA62115).

 CC AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid  
 CC sequences of anti-adipocyte monoclonal antibody heavy chain, light  
 CC chain, and heavy chain complementarity determining regions (CDR) of the  
 CC invention. The antibodies can be used in the treatment of obesity and  
 CC obesity related diseases. The antibodies can be used to deliver drugs or  
 CC pro-drugs directly to the fat mass of an obese patient or the antibody  
 CC can be used as a therapeutic itself. Antibodies binding specifically to  
 CC adipocytes can be used to activate the immune system to destroy the cells  
 CC by complement mediated lysis. The antibodies may be labeled with a  
 CC detectable label such as radiolabel, fluorescent or chemical group and  
 CC used in methods of diagnosis in human subjects e.g. to determine the  
 CC presence of adipocyte antigen on the surface of an adipocyte to detect or  
 CC determine the presence or level of adipocytes in a cell or tissue sample.  
 CC The antibodies can be used as an alternative means of treatment for obese  
 CC patients other than undergoing surgery to remove excess fat. Antibodies  
 CC for different types of fat deposits can also be produced e.g. intra-  
 CC abdominal fat associated with heart disease.

 XX PS  
 XX PS Claim 14; Fig 2; 33pp; English.  
 CC The sequence represents a humanised mutant form of a heavy chain  
 CC variable region from monoclonal antibody IOR-R3, specific for  
 CC epidermal growth factor receptor and originally isolated from a  
 CC mouse hybridoma. The native antibody framework sequence (AAR92990) is  
 CC analysed for T-cell antigenic sequences using a computer algorithm,  
 CC and compared with human Ig sequences. The human Ig with highest  
 CC homology (e.g. AAR92991) is isolated, and residues not within a  
 CC complementarity determining region, canonical structure or Verner  
 CC zone are modified to reduce immunogenicity in humans to produce a  
 CC humanised antibody. This method, which involves the introduction of  
 CC only a few point mutations into T-cell epitope coding regions, is  
 CC generally applicable in humanisation of mouse antibodies. The  
 CC resulting humanised antibodies may be used e.g. as antitumour agents.  
 CC They retain the antigen recognition of the original antibody, but are  
 CC not immunogenic in humans.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Novel antibodies and compounds capable of binding to human	
interleukin-18 useful for treating, e.g., inflammatory disorders,	

PT neurological disorders, heart failure, myocardial infarction, and  
 PT autoimmune diseases -  
 XX  
 PS Claim 25; Page 37; 91pp; English.  
 XX  
 CC The invention provides isolated antibodies, or antigen-binding portions,  
 CC that are capable of binding to human interleukin-18 (IL-18). The  
 CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
 CC disorder where IL-18 is detrimental in, a human subject suffering from,  
 CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
 CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
 CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
 CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
 CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
 CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
 CC antibody may occur before, concurrently, or after administration of a  
 CC second agent selected from an antibody, or fragment, capable of binding  
 CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
 CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
 CC agents. The present sequence represents an anti-IL-18 antibody 2E1 heavy  
 CC chain CDR3 fragment.

 PT Selecting and/or producing a T cell epitope useful in a vaccine  
 PT comprises subjecting a precursor peptide or polypeptide to the action  
 PT of a 20S proteasome to determine the location of the C-terminus -  
 XX  
 PS Disclosure; Page 77; 102pp; English.  
 XX  
 CC The present invention describes a method of producing T cell epitopes,  
 CC involving subjecting a precursor peptide to the action of a 20S  
 CC proteasome, in order to locate the C-terminus of said epitope. This can

CC be used in the production of vaccines, which can then be used to provoke  
 CC a T cell response in the treatment of diseases such as cancer and  
 CC infections. The present sequence is a peptide described in the  
 CC exemplification of the invention.

 PS Claim 27; Page 38; 91pp; English.

CC The invention provides isolated antibodies, or antigen-binding portions,  
 CC that are capable of binding to human interleukin-18 (IL-18). The  
 CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
 CC disorder where IL-18 is detrimental in, a human subject suffering from,  
 CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
 CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
 CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
 CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
 CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
 CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
 CC antibody may occur before, concurrent, or after administration of a  
 CC second agent selected from an antibody, or fragment, capable of binding  
 CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
 CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
 CC agents. The present sequence represents an anti-IL-18 antibody 2E1 light  
 CC chain CDRL fragment.

PS Example 2; Page 88; 91pp; English.

CC The invention provides isolated antibodies, or antigen-binding portions,  
 CC that are capable of binding to human interleukin-18 (IL-18). The  
 CC antibodies may be used to inhibit human IL-18 activity in, and treat a

CC library. The antigen-binding domains of human antibodies (see  
 CC AAW15522-40) to TGF beta-1 and/or beta-2 can be used to counter the  
 CC adverse effects of TGF beta, such as (i) promotion of fibrosis (in  
 CC dermal, ocular or keloid scarring, lung fibrosis, arterial injury,  
 CC proliferative retinopathy, retinal detachment, adult respiratory  
 CC distress syndrome, liver cirrhosis, post myocardial infarction,  
 CC post-angioplasty restenosis, scleroderma, vascular disorders,  
 CC cataract, glaucoma, or esp. neural scarring and glomerulonephritis,  
 CC also (not claimed) osteoporosis), or (ii) immune and inflammatory  
 CC diseases (e.g. rheumatoid arthritis, macrophage deficiency diseases  
 CC or macrophage pathogen infection). Nucleic acids encoding human  
 CC antibody VH and VL can be used for prodn. of recombinant antigen-  
 CC binding domains. These are highly specific, have low dissociation  
 CC constants (pref. less than 5 nM) and low IC50s for neutralisation.

Mixture or panel of antibodies for selecting specific binding members  
 PT that cross the blood brain barrier, for use in delivering different  
 PT molecules and treating neurological diseases

Claim 1; Page 92; 109pp; English.

The present sequence represents an antibody variable light chain (VL)  
 CC fragment. The fragment is used to produce a mixture or panel of 5  
 CC different specific binding members, each comprising an antibody VH  
 CC and/or VL variable domain and capable, when displayed on the surface  
 CC of filamentous bacteriophage particles or in the case of a specific  
 CC binding member comprising the D5 VH and/or VL variable domain when  
 CC bound to human serum amyloid protein, to pass through a mammalian  
 CC blood brain barrier (BBB). The panel is useful for the selection of

CC specific binding members with a desired property such as ability to  
 CC cross BBB, ability to bind endothelial cells or other brain cell antigen,  
 CC ability to bind areas of inflammation in the brain or BBB breakdown or  
 CC ability to bind intracellular adhesion molecules and to bind transferrin  
 CC receptor. The antibodies are useful in diagnosis, prophylaxis and  
 CC treatment of human or animal body, including neurological diseases, such  
 CC as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy  
 CC and traumatic brain injury and any diseases involving inflammation  
 CC occurring within the brain or central nervous system.

PT Agent contg. antigen-binding domain of human antibody to  
 PT transforming growth factor beta 1 or 2 - and nucleic acid encoding  
 PT it, used to neutralise effects of TGF, e.g. for control of fibrosis,  
 PT immune and inflammatory disease

PS Example 1; Fig 4; 184pp; English.

XX This polypeptide comprises the VL domain of human scfv antibody  
 CC VT37, which is cross-reactive with transforming growth factor (TGF)  
 CC beta-2 and TGF beta-1. It is encoded by a gene (AAT60423) isolated  
 CC from an scfv repertoire by phage display and soluble ELISA. The  
 CC dissociation constant of the scfv is 4 nM for TGF beta-1 and 7 nM  
 CC for TGF beta-2. VT37 does not bind to IGF beta-3. The antigen-  
 CC binding domains of human antibodies (see also AAM15522-40) to TGF  
 CC beta-1 and/or beta-2 are useful in the treatment of fibrotic and  
 CC immune or inflammatory diseases.

PT Panel of specific binding members of antibody molecules which bind to  
PT whole adipocytes is used in the treatment of obesity and obesity  
PT related diseases -

PS Claim 1; Page 96-97; 182pp; English.

CC AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid  
CC sequences of anti-adipocyte monoclonal antibody heavy chain, light  
CC chain, and heavy chain complementarity determining regions (CDR) of the  
CC invention. The antibodies can be used in the treatment of obesity and  
CC obesity related diseases. The antibodies can be used to deliver drugs or  
CC pro-drugs directly to the fat mass of an obese patient or the antibody  
CC can be used as a therapeutic itself. Antibodies binding specifically to  
CC adipocytes can be used to activate the immune system to destroy the cells  
CC by complement mediated lysis. The antibodies may be labeled with a  
CC detectable label such as radiolabel, fluorescent or chemical group and  
CC used in methods of diagnosis in human subjects e.g. to determine the  
CC presence of adipocyte antigen on the surface of an adipocyte to detect or  
CC determine the presence or level of adipocytes in a cell or tissue sample.  
CC The antibodies can be used as an alternative means of treatment for obese  
CC patients other than undergoing surgery to remove excess fat. Antibodies  
CC for different types of fat deposits can also be produced e.g. intra-  
CC abdominal fat associated with heart disease.

 PT Improved gene therapy using recombinant gene coding for an antibody  
 PT - for intracellular immunisation against pathogens recognised by the  
 PT antibody, esp. human immunodeficiency virus HIV-1  
 XX  
 Example 11; Page 59; 213pp; English.  
 XX  
 CC The present sequence is a human anti-HIV Fab light chain VL sequence.  
 CC A novel gene therapy method has been produced, where a recombinant  
 CC (rec) gene is introduced into the cells of a mammal. The method is  
 CC improved by using a rec gene encoding an antibody (Ab) (e.g. the  
 CC present sequence) that is selectively specific for an intracellular  
 CC (IC) antigen associated with a disease. The method is used to prevent  
 CC or halt the progress of a disease by IC immunisation. Specifically,  
 CC the Ab can be used to inhibit the replication of a virus, such as  
 CC human T-cell leukaemia virus or especially HIV-1, or of other pathogens,  
 CC e.g. bacteria, fungi. The method provides immunity before or after  
 CC the development of the disease and can be used to control the  
 CC severity of the disease.

 PT Isolation and identification of receptors to specific compounds -  
 PT using microspheres prepared by coupling the compound, via a spacer,  
 PT to a styrene-glycidyl methacrylate polymer.  
 XX  
 PS Claim 5; Page 11; 29pp; English.  
 XX  
 CC This sequence represents the E3330-binding protein, Ref-1. E3330 is  
 CC 3-[(5-(2,3-dimethoxy-6-methyl-1,4-benzoxquinonyl))-2-nonyl-2-propionyl  
 CC acid. This sequence was isolated using the method of the invention. The  
 CC method of the invention is for isolating a substance (S1) that can adhere  
 CC to a substance (S2) possessing physiological activity from a mixture  
 CC containing S1. The method comprises contacting the mixture with a  
 CC microsphere prepared by coupling S2 to a styrene-glycidyl methacrylate  
 CC polymer through a spacer. The process is useful, e.g., for recovery of  
 CC drug binding factors (such as proteins) from cell extracts. The process  
 CC allows easy isolation, purification and identification of receptors to  
 CC specific compounds.

RL - FUNCTION: REPAIRS OXIDATIVE DNA DAMAGES IN VITRO. MAY HAVE A ROLE  
RL IN PROTECTION AGAINST CELL LETHALITY AND SUPPRESSION OF MUTATIONS.  
RL REMOVES THE BLOCKING GROUPS FROM THE 3' TERMINI OF THE DNA STRAND  
RL BREAKS GENERATED BY IONIZING RADIATIONS AND BLEOMYCIN.  
RL - CATALYTIC ACTIVITY: The C-O-P bond 3' to the apurinic or  
RL apyrimidinic site in DNA is broken by a beta-elimination reaction,  
RL leaving a 3'-terminal unsaturated sugar and a product with a

RT "Genomic structure of the rat Apex (major AP endonuclease) gene with
RT an adjacent putative o-sialoglycoprotease (Pmsm1/gcp1l) gene and a
RT processed pseudogene (Apexpl).";
RL Submitted (FEB-1999) to the EMBL/GenBank/DBJ databases.
CC -! FUNCTION: REPAIRS OXIDATIVE DNA DAMAGES IN VITRO. MAY HAVE A ROLE
CC IN PROTECTION AGAINST CELL LETHALITY AND SUPPRESSION OF MUTATIONS.
CC REMOVES THE BLOCKING GROUPS FROM THE 3' TERMINI OF THE DNA STRAND
CC BREAKS GENERATED BY IONIZING RADIATIONS AND BLOWNOCIN.
CC -! CATALYTIC ACTIVITY: The C-O-P bond 3' to the apurinic or
CC apyrimidinic site in DNA is broken by a beta-elimination reaction,
CC leaving a 3'-terminal unsaturated sugar and a product with a
CC terminal 5'-phosphate.
CC -! SUBUNIT: MONOMER (BY SIMILARITY).
CC -! SUBCELLULAR LOCATION: Nuclear..
CC -! SIMILARITY: BELONGS TO THE AP/EXOA FAMILY OF DNA REPAIR ENZYMES.

XX Claim 20; Fig 5; 89pp; English.  
 PS  
 CC The present sequence is that of complementarity determining region  
 CC 2 (CDR2) of the light chain variable region (VL) of human  
 CC single chain antibody (scFv) H1b-1 (see AAY95219), which is directed  
 CC against platelet glycoprotein Ib (GPIb). The H1b series of scFv  
 CC was isolated from a human synthetic VH and VL scFv library on the  
 CC basis of their binding to platelet GPIb. Whether displayed as  
 CC surface proteins on a phagemid or secreted as free scFv by  
 CC *Escherichia coli*, the H1b scFv clones are capable of inhibiting  
 CC von Willebrand factor-dependent aggregation of platelets. The scFv  
 CC are composed of native human protein sequences and are therefore  
 CC attractive potential reagents for therapeutic purposes. They  
 CC provide a new class of antithrombotic agents, useful for the  
 CC prevention of platelet-dependent thrombi in diseased arteries,  
 CC bypass grafts, dialysis etc., and can also be used as diagnostic  
 CC reagents. Methods of inhibiting aggregation of platelets, of  
 CC binding human platelet GPIb alpha and of selecting a VH or VL  
 CC region of an antibody that inhibits platelet aggregation are  
 CC claimed. Fragments of the scFv VH or VL chain, including CDR  
 CC fragments, are also claimed.

XX Novel antibodies and compounds capable of binding to human

XX interleukin-18 useful for treating, e.g., inflammatory disorders,

XX neurological disorders, heart failure, myocardial infarction, and

XX autoimmune diseases -

XX Claim 27; Page 38; 91pp; English.

XX The invention provides isolated antibodies, or antigen-binding portions,

XX that are capable of binding to human interleukin-18 (IL-18). The

XX antibodies may be used to inhibit human IL-18 activity in, and treat a

disorder where IL-18 is detrimental in a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody 2x1 light chain CDR2 fragment.

Production of catalytic antibodies displayed on phage - by  
generating a gene library of antibody-derived domains and expressing  
it in phage vectors  
Disclosure: Fig 20; 133pp; English.

AAT04636 encodes AAR80089 human derived light chain RT3 phage antibody.  
The DNA was used in the prepn. of catalytic antibody (CA) producing  
bacteriophage. The CA can be used to activate/deactivate a  
biological function in an animal by enhancing the rate of cleavage,  
or formation of a specific bond within a mol. in vivo.

Production of catalytic antibodies displayed on bacteriophages -  
comprises generating a gene library of antibody-derived domains  
inserting coding into a phage expression vector and isolating the  
catalytic antibodies

Examples: Fig 20D; 117pp; English.

The invention relates to methods for producing catalytic antibodies  
displayed on a phage. The method comprises: (a) generating a gene  
library of antibody-derived domains; (b) inserting coding for the domains  
into a phage expression vector; and (c) isolating the catalytic  
antibodies. The phage expression vector incorporates a histidine peptide  
in tandem with a myc peptide. The catalytic antibodies can be isolated by  
preparing an antigen; optionally immunising an animal with the antigen;

PT Recombinant anti-rhesus D monoclonal antibody - expressed by  
PT baculovirus-transformed insect cells and useful for preventing  
PT haemolysis in new-born babies

XX Example 1; Page 30; 46pp; French.  
 CC The human monoclonal antibody D7C2, of isotype IgM, recognises a  
 CC 30-32 kD polypeptide on the membrane of rhesus positive red blood  
 CC cells. The antibody agglutinates rhesus positive cells but not  
 CC rhesus negative cells and is useful diagnostically and also for  
 CC preventing haemolysis in new-born rhesus positive babies.  
 CC Recombinant IgM-D7C2 can be produced by insect cells which have  
 CC been transformed by a baculoviral vector comprising a D7C2  
 CC expression cassette. The present sequence is that of the variable  
 CC region of the IgM-D7C2 light chain.

PT it, used to neutralise effects of TGF, e.g. for control of fibrosis,

PT immune and inflammatory disease

XX Claim 5; Fig 2b(v); 184pp; English.

XX This polypeptide sequence comprises the VL domain of human scFv

CC antibody 14F12, which is specific for transforming growth factor

CC (TGF) beta-2. It is encoded by a gene (AAT60375) isolated from a

CC light chain shuttle repertoire of a peripheral blood lymphocyte

CC library. The antigen-binding domains of human antibodies (see

CC AAW15522-40) to TGF beta-1 and/or beta-2 can be used to counter the

CC adverse effects of TGF beta, such as (i) promotion of fibrosis (in

CC dermal, ocular or keloid scarring, lung fibrosis, arterial injury,

CC proliferative retinopathy, retinal detachment, adult respiratory

CC distress syndrome, liver cirrhosis, post myocardial infarction,

CC post-angioplasty restenosis, scleroderma, vascular disorders,

CC cataract, glaucoma, or esp. neural scarring and glomerulonephritis,

CC also (not claimed) osteoporosis), or (ii) immune and inflammatory

CC

CC

CC

CC

CC

CC diseases (e.g. rheumatoid arthritis, macrophage deficiency diseases  
 CC or macrophage pathogen infection). Nucleic acids encoding human  
 CC antibody VH and VL can be used for prodn. of recombinant antigen-  
 CC binding domains. These are highly specific, have low dissociation  
 CC constants (pref. less than 5 nM) and low IC50s for neutralisation.

XX Improved gene therapy using recombinant gene coding for an antibody

XX - for intracellular immunisation against pathogens recognised by the

XX antibody, esp. human immunodeficiency virus HIV-1

XX Example 11; Page 59-60; 213pp; English.

XX The present sequence is a human anti-HIV Fab light chain VL sequence.

XX A novel gene therapy method has been produced, where a recombinant

CC (rec) gene is introduced into the cells of a mammal. The method is  
 CC improved by using a rec gene encoding an antibody (Ab) (e.g. the  
 CC present sequence) that is selectively specific for an intracellular  
 CC (IC) antigen associated with a disease. The method is used to prevent  
 CC or halt the progress of a disease by IC immunisation. Specifically,  
 CC the Ab can be used to inhibit the replication of a virus, such as  
 CC human T-cell leukemia virus or especially HIV-1, or of other pathogens,  
 CC e.g. bacteria, fungi. The method provides immunity before or after  
 CC the development of the disease and can be used to control the  
 CC severity of the disease.

CC The present sequence is that of the light chain variable region  
CC (VL) of human single chain antibody (scFv) H1b-1 (see AA95198),  
CC which is directed against platelet glycoprotein Ib (GPIb). The H1b  
CC series of scFv was isolated from a human synthetic VH and VL scFv  
CC library by 3 rounds of phagemid selection against transfected CHO  
CC cells expressing the GPIb alpha component of the GPIb/IX/V complex  
CC on their surface, followed by a 4th round of selection against  
CC washed human platelets, and 2 final rounds in which attempts were  
CC made to displace scFv from washed platelets by flooding with  
CC murine monoclonal antibody or mimotope peptide (see AA95229).  
CC Whether displayed as surface proteins on a phagemid or secreted  
CC as free scFv by Escherichia coli, the H1b scFv clones are capable  
CC of inhibiting von Willebrand factor-dependent aggregation of  
CC platelets. The scFv are composed of native human protein sequences  
CC and are therefore attractive potential reagents for therapeutic  
CC purposes. They provide a new class of antithrombotic agents,  
CC useful for the prevention of platelet-dependent thrombi in  
CC diseased arteries, bypass grafts, dialysis etc., and can also be  
CC used as diagnostic reagents. Methods of inhibiting aggregation  
CC of platelets, of binding human platelet GPIb alpha and of selecting  
CC a VH or VL region of an antibody that inhibits platelet aggregation  
CC are claimed.

Patent No. 5872215  
GENERAL INFORMATION:  
APPLICANT: Osbourn, JK  
APPLICANT: Allen, DJ  
TITLE OF INVENTION: Specific binding members, materials and  
TITLE OF INVENTION: Method.  
NUMBER OF SEQUENCES: 53  
CORRESPONDENCE ADDRESS:  
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun  
STREET: 6300 Sears Tower, 233 South Wacker Drive  
CITY: Chicago  
STATE: Illinois  
COUNTRY: United States of America  
COMPUTER READABLE FORM:  
MEDIUM TYPE: Floppy disk  
COMPUTER: IBM PC compatible  
OPERATING SYSTEM: PC-DOS/MS-DOS  
SOFTWARE: Patentin Release #1.0, Version #1.25 (EPO)  
CURRENT APPLICATION DATA:  
APPLICATION NUMBER: US/08/652.816A  
FILING DATE: 23-MAY-1996  
PRIOR APPLICATION DATA:  
APPLICATION NUMBER: GB 9125579.4

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

CC The invention provides isolated antibodies, or antigen-binding portions,  
CC that are capable of binding to human interleukin-18 (IL-18). The  
CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
CC disorder where IL-18 is detrimental in, a human subject suffering from,  
CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
CC antibody may occur before, concurrent, or after administration of a  
CC second agent selected from an antibody, or fragment, capable of binding  
CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
CC agents. The present sequence represents an anti-IL-18 antibody 2E1 light  
CC chain CDR3 fragment.

Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases

Claim 1; Page 76; 109pp; English.

AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain

cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.

CC PCR was used to prepare a human scFv library from RNA from white  
CC blood cells from an unimmunised donor. Heavy chains from IgG and  
CC IgM antibodies were amplified separately. Four separate libraries  
CC were generated (IgG-K, IgG-lambda, IgM-K and IgM-lambda). The  
CC purified scFv fragments were ligated into the phagemid pHEM1 for  
CC expression on the surface of fd bacteriophage as gene III fusions.  
CC The clones were then subjected to affinity selection for binding  
CC to phox:BSA by selection on tubes followed by analysis by ELISA. Of  
CC 96 clones analysed, 43 showed binding to both phox:BSA and BSA.  
CC These were designated BSA binders. Thirteen of fourteen clones  
CC sequenced had the same sequence, the VH derived from a human VH3  
CC family gene (AAR22571) and the VL from a human V lambda 3 family  
CC gene (shown here). The other was derived from a human VH4 family  
CC gene and a human VK1 family gene. One clone bound only to phox:BSA  
CC (oxazolone binder). This sequence revealed a VH derived from a  
CC human VH1 family gene (AAR22569) and VL from a human V lambda 1  
CC family gene (AAR22570).  
CC See also AAR21260-307, 309-312, AAR22450, AAR22565, AAR22567-81.

 PT antigen, useful in the treatment and diagnosis of tumors  
 XX  
 XX Claim 5; Fig 2; 70pp; English.  
 XX  
 XX The present sequence is human antibody clone N876 light chain  
 CC variable region. This is useful for targeting the necrotic centres of  
 CC malignant tumors by binding to human histone H1 and other intracellular  
 CC antigens. The specific binding members based on the CDRs  
 CC (complementarity determining regions) of N876 can be used in diagnosis  
 CC and treatment of tumors like cervical, ovarian, prostate, lung, liver,  
 CC pancreatic, colon and stomach tumors. The antibody is labelled with  
 CC functional labels such as toxins and enzymes which are capable of  
 CC converting prodrugs into active drugs at the site of a tumour.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX Novel antibodies and compounds capable of binding to human  
PT interleukin-18 useful for treating, e.g., inflammatory disorders,  
PT neurological disorders, heart failure, myocardial infarction, and  
PT autoimmune diseases -

XX Claim 25; Page 37; 91pp; English.

XX The invention provides isolated antibodies, or antigen-binding portions,  
CC that are capable of binding to human interleukin-18 (IL-18). The  
CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
CC disorder where IL-18 is detrimental in, a human subject suffering from,  
CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18

CC antibody may occur before, concurrent, or after administration of a  
CC second agent selected from an antibody, or fragment, capable of binding  
CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
CC agents. The present sequence represents an anti-IL-18 antibody 2E1 heavy  
CC chain CDRL fragment.

XX In vitro display and evolution of proteins - by transcription and  
PT translation of DNA in a cell free system, selection and recovery of  
PT complexes and RT-PCR on RNA bound to ribosomes

XX Example 13; Fig 19; 62pp; English.

XX The invention relates to methods for the display and selection of  
CC proteins or peptides and for recovery of the genetic material encoding  
CC them. One method comprises (a) transcription and translation of DNA in a  
CC cell free system such that complexed particles are formed, each  
CC comprising at least one individual nascent protein or peptide or other  
CC DNA expression product associated with one or more ribosomes and the  
CC specific mRNA encoding the protein or peptide; (b) contacting the  
CC complexed particles with a ligand, antigen, antibody or other agent in  
CC order to select particles through binding to the protein or peptide  
CC product; and (c) recovering the genetic information encoding the protein  
CC or peptide as DNA by RT-PCR carried out on the mRNA while the latter  
CC remains bound to the complexed particle. The steps of display, selection  
CC and recovery can be repeated in consecutive cycles. The method is  
CC exemplified using single-chain antibody constructs as antibody-ribosome-  
CC mRNA complexes (ARMS). Methods in which the DNA is produced by RT-PCR,

CC methods for making antibodies of human, mouse or rat are also provided.  
 CC The methods can be used for the display and selection of single chain  
 CC antibody fragments from libraries, antibody engineering, selection of  
 CC human antibodies and selection of proteins from mRNA libraries. They can  
 CC also be used to select ligands for combining sites or receptors, such  
 CC ligands having potential uses as drugs or therapeutics. By carrying out the  
 CC RT-PCR recovery step directly on the intact ribosome complex without  
 CC prior dissociation to release the mRNA maximal efficiency and  
 CC sensitivity can be obtained. Peptides AAW95247 to AAW95271 represent  
 CC sequences of human anti-progesterone and anti-testosterone antibodies  
 CC isolated from an immunised transgenic mouse by AMW display.

PT New antibodies specific for plasma cells, useful for treatment and  
 PT diagnosis of autoimmune diseases and plasma cell tumors

PS Claim 1; Page 11; 18pp; German.

CC This invention describes novel antibodies (Ab) in which the variable  
 CC region (VR) of at least one chain and/or the VR of at least one heavy  
 CC chain includes at least one of 7 specified sequences, or fragments of  
 CC these sequences, or contain at least one light chain and/or heavy  
 CC chain encoded by specific nucleic acid sequences (I) and (II),  
 CC reproduced, or their fragments. The products of the invention have  
 CC antitumor and immunomodulatory activity. Ab, or other antibodies that  
 CC recognize the same antigen, are used: (i) to identify cognate antigens;  
 CC (ii) for specific labeling of plasma cells (PC), for identification or  
 CC separation, e.g. in an extracorporeal system; (iii) for generating  
 CC additional antibodies able to label PC; and (iv) for treating autoimmune  
 CC diseases and/or tumors, e.g. multiple myeloma, lymphoma and/or  
 CC plasmacytoma. Ab are specific for mature PC, i.e. they do not recognize

CC precursor stages, even though these precursors are used as immunogens. As  
 CC therapeutic agents, they should show fewer side effects than conventional  
 CC chemotherapeutic agents. This sequence represents the Wue-1 antibody  
 CC variable region heavy chain complementarity determining region CDR-1  
 CC fragment described in the method of the invention.

PT Novel anti-human interleukin (IL)-18 rodent neutralizing monoclonal  
 PT antibody having high affinity and useful for treating IL-18 mediated  
 PT disorders such as multiple sclerosis, rheumatoid arthritis and  
 PT psoriasis

PS Disclosure; Fig 2; 64pp; English.

CC The present sequence is complementarity determining region I (CDR I)  
 CC of the rat antibody 2C10 heavy chain variable region. The antibody has  
 CC high affinity for human interleukin-18 (IL-18) and is useful for treating  
 CC and diagnosing IL-18-mediated disorders, e.g. autoimmune diseases such as  
 CC multiple sclerosis, rheumatoid arthritis, type I or insulin dependent  
 CC diabetes, inflammatory bowel disease and psoriasis. Specific changes can  
 CC be introduced into the nucleotide sequences encoding the CDRs or  
 CC framework regions of the variable light chain and heavy chain peptides.  
 CC The resulting modified or fusion nucleic acid sequences can then be  
 CC introduced into a plasmid for expression.

Humanised, semi-chimeric and chimeric antibodies against human high-affinity IGE receptor - useful medicinally and have low antigenicity in humans

Claim 1; Page 13; 26pp; Japanese.

The present complementarity determining region 1 (CDR1), which is from a murine, anti-human high affinity immunoglobulin E (IGE) receptor, monoclonal antibody (Mab) light chain variable region, can be used in the preparation of humanised or semi-chimeric anti-human high affinity IGE receptor Mab. The Mab can be used to treat or prevent diseases, specifically allergies, associated with the receptor. The humanised, semi-chimeric or chimeric Mab have very low antigenicity in humans.

 PT Identifying compounds which interact with target molecules - using  
 PT enantiomers of the target molecules and testing of enantiomers of  
 PT selected compounds.  
 PS  
 PS Disclosure; Fig 7; 89pp; English.  
 CC 6-mer peptides AAM4294-309 are identified as ligands of a biotinylated,  
 CC cross-linked interleukin-8 (IL-8) target, using the method of the  
 CC invention. This novel method identifies compounds which interact with  
 CC a target molecule, and comprises contacting a screening molecule with  
 CC a variegated compound library, where the screening molecule comprises  
 CC solid target molecule, or the enantiomer if the target molecule is  
 CC chiral. Compounds which have a desired interaction with the target  
 CC molecule are selected, and the ability of their enantiomer to interact  
 CC with the target molecule is tested. Ligands for a target protein can be  
 CC identified by combining a D-enantiomer of a target protein (a D-target  
 CC protein), and a variegated compound library, and then selecting one or  
 CC more compounds from the library which have a desired binding interaction  
 CC with the D-target protein. The methods can be used for identifying  
 CC agonists or antagonists of targets such as receptors, enzymes, DNA  
 CC binding proteins or signal transduction proteins. The methods can  
 CC provide a structurally selective approach in addition to scoring for  
 CC interaction of functional groups. They provide a powerful selection  
 CC method that allows for the production of ligands with the same diversity  
 CC as peptides but with the greatly improved pharmacokinetic profiles needed  
 CC for drug activity.

 PT gene CDR - useful for prodn. of Ig heavy and light chain  
 PT combinatorial antibody libraries

XX Example 9C; Page 76; 125pp; English.

PS

CC AAR95324, AAR95325 and AAR99005 are heavy chain complementarity

CC determining regions (CDRs) 1, 2 and 3, respectively of an anti-thyroid

CC peroxidase (TPO) antibody clone SPL.2. Several anti-TPO clones were made

CC using mutagenic primers which induce mutations in the CDRs of the light

CC and heavy chain variable regions, the primers pref. mutate CDR3 of a

CC human Ig light chain. The mutagenic primers have sequences at their 3'

CC and 5' ends both capable of binding different framework regions linked

CC by a sequence 6 to 50 nucleotides long. Different immunoglobulins

CC produced using the primers may be used to produce antibody libraries

CC having diverse and novel immunospecificities and affinities. By using

CC mutagenic ONS an extremely large population of different randomised

CC binding sites can be created and use of the universal light chain

CC increases the number of combinations which yield functional

CC heterodimeric antibodies.

PS Claim 11; Page 271; 291pp; Japanese.

XX

CC The present invention describes chimeric antibody (Ab) heavy (H) chains

CC containing the variable region of the H chain of a mouse monoclonal Ab

CC recognising human tissue factor (hrf) and the constant region of the H

CC chain of a human Ab. The variable region is one of six specified

CC sequences (which are the H chain variable regions from mouse monoclonal

CC Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L)

CC chains containing the variable region of the L chain of a mouse

CC monoclonal Ab recognising human tissue factor (hrf) and the constant

CC region of the L chain of a human Ab, the variable region being one of six

CC specified sequences (which are the L chain variable regions from mouse

CC monoclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for

CC the treatment and prevention of thrombotic disease, especially of

CC disseminated intravascular coagulation (DIC). The humanised antibody has

CC the high hrf binding activity of the mouse monoclonal antibody but

CC greatly reduced immunogenicity. AA233001 to AA233091 and Y527007 to

CC AAI52767 represent sequences used in the exemplification of the present

CC invention.

 PT Peptide sequence determination used in e.g. DNA cloning - by  
 PT comparing mass spectra of the unknown peptide with a library of  
 PT linear chain known peptide sequences  
 XX  
 PS Example 1; Page 20; 40pp; English.

The invention relates to a method for determination of the amino acid  
 CC sequence of an unknown peptide. The method comprises (a) determining  
 CC the molecular mass and an experimental fragmentation spectrum for the  
 CC peptide; (b) comparing the experimental fragmentation spectrum of the  
 CC unknown peptide with a theoretical fragmentation spectra calculated for  
 CC a peptide library composed of all possible linear sequences of amino  
 CC acids having a total mass that corresponds to the molecular mass of the  
 CC unknown peptide; and (c) identifying a peptide in the library with a  
 CC theoretical fragmentation spectrum that most closely matches the  
 CC fragmentation spectrum of the unknown peptide. The method is useful in  
 CC DNA cloning, anti-body production, identification of recombinant  
 CC products, and the study of post-translational modifications. It allows  
 CC the sequence of unknown peptides or proteins with no sub-sequence  
 CC identity to be characterised using mass spectrometry. Sequences  
 CC AAW87101 to AAW87364 represent a library of linear peptides constructed  
 CC to exemplify the method. The isoleucine residue in these peptides can be  
 CC replaced by leucine to construct another 264 linear peptides to be  
 CC included in the library.

 XX  
 Claim 25; Page 37; 91pp: English.  
 CC The invention provides isolated antibodies, or antigen-binding portions,  
 CC that are capable of binding to human interleukin-18 (IL-18). The  
 CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
 CC disorder where IL-18 is detrimental in, a human subject suffering from,  
 CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
 CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
 CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
 CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
 CC as autoimmune hepatitis and autoimmune neutropenia, and mental disorders  
 CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
 CC antibody may occur before, concurrent, or after administration of a  
 CC second agent selected from an antibody, or fragment, capable of binding  
 CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
 CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
 CC agents. The present sequence represents an anti-IL-18 antibody 2E1 heavy  
 CC chain CDR3 fragment.

PT Diagnosing disease by detecting frameshift mutations in RNA or  
 PT corresponding protein mutations - used to diagnose cancer and  
 PT neurological diseases, particularly Alzheimer's disease, and also  
 PT for treatment and prevention with specific ribozymes or wild-type  
 PT RNA

PS Disclosure: Figure 8; 258pp; English.

CC This invention describes a novel method for the diagnosis of a disease  
 CC caused by, or associated with, an RNA molecule that has a frameshift  
 CC mutation. The method is used to diagnose age-related diseases, especially  
 CC cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's  
 CC disease, Down's syndrome, myotonic dystrophy, Huntington's disease,  
 CC multiple sclerosis, alcoholic liver disease, diabetes mellitus type II  
 CC and many others listed) or susceptibility to these disorders. The method

CC allows a definitive diagnosis of Alzheimer's disease in living patients,  
CC at an early stage. It is based on the observation that disease may be  
CC caused by mutations in RNA rather than DNA. The invention describes the  
CC use of neuronal system RNA molecules, specifically proteins including  
CC beta-amyloid precursor protein (beta-ApP), the microtubule associated  
CC proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule  
CC associated protein 2 (MAP2), neurofilament-L, neurofilament-M,  
CC neurofilament-F, presenilin I, presenilin II, glial fibrillary acidic  
CC protein (GFAP), the cellular tumour antigen p53, B-cell leukemia/lymphoma  
CC 2 (bcl-2) proto-oncogene, semaphorin III, Hsp-1, high mobility group  
CC protein-C (HMGp-C) and neuroendocrine specific protein A.

DNA encoding human epididymis polypeptides - useful for, e.g.  
diagnosis of male infertility

Example 9; Page 19; 29pp; German.

This sequence represents a novel human epididymis-specific protein, HE4  
epitope fragment. This protein may be used for cloning and for expression  
of human epididymis-specific polypeptides in prokaryotic or eukaryotic  
host cells. Such proteins and antibodies generated from them may be used  
for diagnosis of e.g. male infertility. The polypeptides and antibodies  
may also be used for treatment of male infertility and for  
immunosterilisation of mammals.

Novel FCRI3.varCSA protein, useful for modulating parasitized red blood  
cell binding, sequestration and onset of maternal malaria -

Disclosure; Page 21; 78pp; English.

The invention relates to a P. falciparum FCRI3.varCSA protein, that is  
capable of binding to chondroitin sulfate A (CSA). The var gene and the  
corresponding P. falciparum erythrocyte membrane protein 1 (PFEMP1)  
modulate adhesion of parasitized red blood cell (PRBC) to CSA. The  
CC protein and the encoding gene are useful for treating and preventing  
CC maternal malaria in a patient identified at a risk for contracting  
CC maternal malaria or in a patient afflicted with maternal malaria. The  
CC present sequence represents a fragment of the P. falciparum FCRI3.varCSA  
protein.

 XX Novel tumor necrosis factor inhibitors for treating disorders mediated  
 PT by tumor necrosis factor alpha activity e.g. autoimmune disorders,  
 PT pathogenic infections, malignant tumors and cachexia  
 XX PS Disclosure; Column 8; 17pp; English.  
 XX This sequence represents a fragment of a tumour necrosis factor inhibitor  
 CC of the invention. The inhibitors are antagonists of tumour necrosis  
 CC factor-alpha (TNF-alpha), comprising less than 15 amino acids, having  
 CC restricted conformation and capable of binding to TNF p55 and/or TNF p75  
 CC receptor. The inhibitors are useful for treating a disease or condition  
 CC mediated by TNF-alpha such as sepsis syndrome, cachexia, circulatory  
 CC collapse and shock resulting from acute or chronic bacterial infection;  
 CC acute and chronic parasitic or infectious processes, including bacterial,  
 CC viral and fungal infections; acute and chronic immune and autoimmune  
 CC disorder, such as systemic lupus erythematosus and rheumatoid arthritis,  
 CC alcohol-induced hepatitis; chronic inflammatory disorder such as  
 CC sarcoidosis and Crohn's disease; vascular inflammatory disorder such as  
 CC disseminated intravascular coagulation, graft-versus-host disease,  
 CC Rawasaki's disease, and malignant disorders involving TNF-alpha-secreting  
 CC tumours.

 XX PS Claim 5; Page 34; 42pp; English.  
 XX AAM56171-248 represent anti-inflammatory tripeptides of the invention.  
 CC They are derived from the formulae:  
 CC Xaa-Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where  
 CC Xaa = any amino acid residue.  
 CC Cyclic derivatives of the peptides also function as anti-inflammatory  
 CC agents. The peptides can be covalently linked to one another either  
 CC directly or through a spacer. The peptides and their derivatives have  
 CC macrophage inhibitory and T-cell inhibitory activity and thus,  
 CC anti-inflammatory activity. The peptides and compositions have  
 CC anti-immune activity, i.e. inhibitory effects against a cellular and  
 CC humoral immune response, including a response not associated with  
 CC inflammation. The peptides also inhibit the ability of macrophages and  
 CC T-cells to adhere to extracellular matrix components and fibronectin, as  
 CC well as up-regulated fas receptor expression in T-cells. They can be  
 CC used to inhibit unwanted immune reaction and inflammation.

 PT New presenilin genes - useful for diagnosis, therapy and drug  
 PT screening of familial Alzheimer's disease, cerebral disorders, etc.  
 XX  
 PS Claim 71; Page -: 178pp; English.  
 XX  
 CC AAW05768-W05788 represent antigenic fragments of the human  
 CC presenilin-1-1 protein (see AAW05733 for wild type sequence). AAW05734  
 CC represents a different wild type form of presenilin-1 that results from  
 CC alternate splicing of the genomic DNA sequence. The presenilins are a  
 CC family of highly conserved integral membrane proteins with a common  
 CC structural motif, common alternate splicing patterns, and common  
 CC mutational hot spot regions. Mutations in PS genes are implicated in  
 CC familial Alzheimer's disease (AD) and possibly other diseases such as  
 CC cerebral haemorrhage, schizophrenia, depression etc., so detection of  
 CC mutations in the DNA encoding the wild type sequences can be used for  
 CC diagnosis of these diseases. The wild type proteins, or vectors that  
 CC express them or containing antisense sequences, antibodies selective for  
 CC these mutant forms of the proteins and modulators of PS gene expression  
 CC are potentially useful for treatment of AD etc. Transgenic animals are  
 CC useful as models for drug screening. The antibodies can also be used e.g.  
 CC for affinity purification and in immunoassays.

 CC The sequences given in AAP23931 - AAP23938 are synthetic peptides which  
 CC were introduced into human lactoferrin (LF) by introducing the DNA  
 CC encoding the peptide into the human LF gene and then incubating the  
 CC mixture. The introduction of the peptide caused increased  
 CC transformation rates compared to unmodified LF and this method could  
 CC be used to introduce an exogenous gene into an animal cell with no  
 CC stress.

Use of peptide including active carboxy-terminal fragment of beta-endorphin - to treat diabetes mellitus or increase uptake of blood glucose in muscle

Claim 8; Page 11; 18pp; English.

This peptide is an active carboxy-terminal fragment derived from beta-endorphin. The peptide or an active analogue can be used in the manufacture of a medicament for the treatment of diabetes mellitus, by increasing uptake of blood glucose in muscle. The peptide does not include the opioid amino-terminal region of beta-endorphin, and enhances uptake of glucose into muscle by a non-insulin dependent route.

XX Claim 20; Fig 5; 89pp; English.

XX The present sequence is that of complementarity determining region  
XX 2 (CDR2) of the light chain variable region (VL) of human  
CC single chain antibody (scFv) H1b-1 (see AAY95198), which is directed  
CC against platelet glycoprotein Ib (GP1b). The H1b series of scFv  
CC was isolated from a human synthetic VH and VL scFv library on the  
CC basis of their binding to platelet GP1b. Whether displayed as  
CC surface proteins on a phagemid or secreted as free scFv by  
CC Escherichia coli, the H1b scFv clones are capable of inhibiting  
CC von Willebrand factor-dependent aggregation of platelets. The scFv  
CC are composed of native human protein sequences and are therefore  
CC attractive potential reagents for therapeutic purposes. They  
CC provide a new class of antithrombotic agents, useful for the  
CC prevention of platelet-dependent thrombi in diseased arteries,  
CC bypass grafts, dialysis etc., and can also be used as diagnostic  
CC reagents. Methods of inhibiting aggregation of platelets, of  
CC binding human platelet GP1b alpha and of selecting a VH or VL  
CC region of an antibody that inhibits platelet aggregation are  
CC claimed. Fragments of the scFv VH or VL chain, including CDR  
XX fragments, are also claimed.

XX interleukin-18 useful for treating, e.g., inflammatory disorders,

XX neurological disorders, heart failure, myocardial infarction, and

XX autoimmune diseases -

XX Claim 27; Page 38; 91pp; English.

XX The invention provides isolated antibodies, or antigen-binding portions,  
XX that are capable of binding to human interleukin-18 (IL-18). The  
XX antibodies may be used to inhibit human IL-18 activity in, and treat a

disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, an anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody 2E1 light chain CDR2 fragment.

XX compounds, by inhibiting binding of hepatitis C virus envelope  
XX glycoprotein or CDR1 -  
XX  
XX Claim 24; Page 75; 138pp; Japanese.

The present sequence represents a complementarity determining region (CDR) of a single chain (SCFV) antibody of the invention. The specification describes a substance can inhibit the binding between hepatitis C virus (HCV) and cells with potential HCV infection, cells with expression of CDR1, or CDR1. This substance is especially an antibody with affinity towards HCV E2/NS1 protein containing amino acid sequences based on the CDR1, CDR2 and CDR3 of the H and L chain variable regions. The antibody inhibits the viral envelope glycoprotein. It is also a CDR1 inhibitor. The antibodies and drugs are used for treatment and/or prevention of hepatitis C, or for diagnosis of

hepatitis C.

XX New thrombopoietin receptor agonist antibodies - useful for  
XX treating immunological or hematological disorders  
XX  
XX Claim 10; Page 75; 86pp; English.

The invention relates to an agonist antibody (Ab) which binds to a thrombopoietin receptor (TPO-R). The antibodies which bind the TPO-R can be used in the same way and for the same indications as thrombopoietin (TPO). They can stimulate proliferation, differentiation or growth of megakaryocytes. They may also be able to stimulate megakaryocytes to increase platelet production. They can be used for treating immunological or hematopoietic disorders, especially thrombocytopenia. CC Thrombocytopenia - associated bone marrow hypoplasia (e.g. aplastic anemia following chemotherapy or bone marrow transplant) may be effectively treated with the antibody compounds as well as disorders such as disseminated intravascular coagulation (DIC), immune thrombocytopenia (HIV-induced and non HIV-induced), chronic idiopathic thrombocytopenia, congenital thrombocytopenia, thrombotic thrombocytopenia and myelodysplasia. They can also be used in e.g. myelotoxic chemotherapy for treatment of solid tumours or leukaemia, myeloblastic chemotherapy for autologous or allogeneic bone marrow transplant, myelodysplasia, idiopathic aplastic anemia, congenital thrombocytopenia, and immune thrombocytopenia. The antibodies which bind to the TPO receptor can be used for improving neuromuscular function in a patient, e.g. in muscular dystrophy. The products can also be used for detection and diagnosis. The

CC antibodies have a longer half-life than the natural ligand for the TPO-R.  
CC Sequences AAY06687-Y06712 represent CDR1, CDR2, and CDR3 regions of  
CC variable heavy (VH) chains and variable light (VL) chains of antibodies  
CC Ab1 to Ab6.

XX New catalytic antibodies able to decompose cocaine, single-chain  
PT analogues used to treat cocaine overdose and addiction, required  
PT in far smaller doses than antibodies that antagonise cocaine by  
PT simply binding

PS Claim 6; Page 84; 147pp; English.

CC AAW39827-29 represent the sequences of the light chain complementarity  
CC determining regions (CDRs) of the catalytic antibody 9A3, which is able  
CC to degrade cocaine. A series of cocaine transition state analogues  
CC (TSAs) were prepared and used to immunise mice for production of  
CC hybridomas. Catalytic antibodies were identified by their capacity to  
CC release 3H-benzoic acid from 3H-phenyl cocaine. The 9A3 antibody was  
CC identified using TSA1, which is an immunogenic conjugate of a phosphate  
CC monoester transition state analogue. Antibody 9A3 has a per minute Kcat  
CC of 0.015. The antibodies reduce the concentration of cocaine in a  
CC subject, and are used particularly for the treatment of an overdose. They  
CC are also used for treating addiction (by reducing the in vivo  
CC concentration that can be achieved).

 XX  
 CC This invention describes novel nucleic acid fragments that encode human  
 CC auto-antibodies and anti-idiotypic antibodies against blood platelet  
 CC membrane protein, GPIIb/IIIa. The products of the invention are used  
 CC for diagnosis (including monitoring and determining predisposition)  
 CC prevention and treatment of autoimmune thrombocytopenic purpura (AITP)  
 CC and also for modulating binding of fibrinogen to thrombocytes  
 CC (particularly to dissolve thrombi and/or prevent their formation, e.g.  
 CC in cases of cardiac infarction or pulmonary embolism). Unlike murine  
 CC antibodies, human antibodies (hAb) do not induce adverse side effects  
 CC and persist for longer in vivo than small peptides. AAW90293-W90337  
 CC represent antibody fragments used in the method of the invention.

XX This invention relates to a new human antibody specific for human  
XX interleukin-12 (IL-12). The invention also includes antigen binding  
XX portions that bind to IL-12. Sequences AAB39485-B39516 represent human  
XX anti-IL-12 antibody heavy and light chain complementarity determining  
XX region (CDR) amino acid sequences, and also includes variable region  
XX amino acid sequences. Other variable region amino acid sequences are  
XX given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771  
XX represent anti-IL-12 CDR3 related amino acid sequences. AAB39772-B40063  
XX represent other CDR sequences. Light chain CDR3 consensus sequences are  
XX given in AAB40064-B40067. Primers used in the identification and  
XX construction of the antibodies of the invention are given in  
XX AAC61062-C61071. The antibody of the invention is a neutralising  
XX antibody and has antirheumatic; antiarthritic; antisclerotic;  
XX antiinflammatory; neuroprotective; antiparasitic; antisclerotic;  
XX cardiant; antiparasitic; antibacterial and immunosuppressive activity.  
XX The antibodies or antigen-binding fragments are useful in the treatment  
XX of disorders associated with detrimental release of human IL-12,  
XX especially Crohn's disease, multiple sclerosis and rheumatoid arthritis.  
XX They can also be used in the manufacture of a pharmaceutical composition  
XX to treat human IL-12 disorders.

XX  
PS Claim 27; Page 38; 91pp; English.  
XX  
CC The invention provides isolated antibodies, or antigen-binding portions,  
CC that are capable of binding to human interleukin-18 (IL-18). The  
CC antibodies may be used to inhibit human IL-18 activity in, and treat a  
CC disorder where IL-18 is detrimental in, a human subject suffering from,  
CC inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,  
CC inflammatory bowel disease, and osteoarthritis), neurological disorders  
CC (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and  
CC stroke), heart failure, myocardial infarction, autoimmune diseases such  
CC as autoimmune hepatitis and autoimmune neuropathia, and mental disorders  
CC (e.g., depression and schizophrenia). Treatment with an anti-IL-18  
CC antibody may occur before, concurrent, or after administration of a  
CC second agent selected from an antibody, or fragment, capable of binding  
CC human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids,  
CC cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory  
CC agents. The present sequence represents an anti-IL-18 antibody 2B1 light  
CC chain CDR3 fragment.

PT Mixture or panel of antibodies for selecting specific binding members  
PT that cross the blood brain barrier, for use in delivering different  
PT molecules and treating neurological diseases

PS Claim 1; Page 76; 109pp; English.

CC AAG62970-AAG63005 represent complementarity determining region 3 (CDR3)  
CC of VL and VH chains of antibodies of the invention. The specification  
CC describes a mixture or panel of 5 different specific binding members,  
CC each comprising an antibody VH and/or VL variable domain and capable,  
CC when displayed on the surface of filamentous bacteriophage particles or  
CC in the case of a specific binding member comprising the D5 VH and/or VL  
CC variable domain when bound to human serum amyloid protein, to pass  
CC through a mammalian blood brain barrier (BBB). The panel is useful for  
CC the selection of specific binding members with a desired property such  
CC as ability to cross BBB, ability to bind endothelial cells or other brain  
CC cell antigen, ability to bind areas of inflammation in the brain or BBB  
CC breakdown or ability to bind intracellular adhesion molecules and to bind  
CC transferrin receptor. The antibodies are useful in diagnosis, prophylaxis  
CC and treatment of human or animal body, including neurological diseases,

CC such as Alzheimer's disease, prion disease, AIDS-related dementia,  
CC epilepsy and traumatic brain injury and any diseases involving  
CC inflammation occurring within the brain or central nervous system.

 PT Panel of specific binding members of antibody molecules which bind to  
 PT whole adipocytes is used in the treatment of obesity and obesity  
 PT related diseases -

Example 7; Page 78; 182pp; English.

CC AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid  
 CC sequences of anti-adipocyte monoclonal antibody heavy chain, light  
 CC chain, and heavy chain complementarity determining regions (CDR) of the  
 CC invention. The antibodies can be used in the treatment of obesity and  
 CC obesity related diseases. The antibodies can be used to deliver drugs or  
 CC pro-drugs directly to the fat mass of an obese patient or the antibody  
 CC can be used as a therapeutic itself. Antibodies binding specifically to  
 CC adipocytes can be used to activate the immune system to destroy the cells  
 CC by complement mediated lysis. The antibodies may be labeled with a  
 CC detectable label such as radiolabel, fluorescent or chemical group and  
 CC used in methods of diagnosis in human subjects e.g. to determine the  
 CC presence of adipocyte antigen on the surface of an adipocyte to detect or  
 CC determine the presence or level of adipocytes in a cell or tissue sample.  
 CC The antibodies can be used as an alternative means of treatment for obese  
 CC patients other than undergoing surgery to remove excess fat. Antibodies  
 CC for different types of fat deposits can also be produced e.g. intra-  
 CC abdominal fat associated with heart disease.

PT Isolated nucleic acid molecule encoding anti-human platelet  
 PT glycoprotein IB alpha molecule useful for producing antibodies which  
 PT inhibit platelet aggregation -

PS Claim 21; Fig 5; 89pp; English.

CC The present sequence is that of complementarity determining region  
 CC 3 (CDR3) of the light chain variable region (VL) of human  
 CC single chain antibody (scFv) H1b-1 (see AA95198), which is directed  
 CC against platelet glycoprotein IB (GP1b). The H1b series of scFv  
 CC was isolated from a human synthetic VH and VL scFv library on the  
 CC basis of their binding to platelet GP1b. Whether displayed as  
 CC surface proteins on a phagemid or secreted as free scFv by  
 CC Escherichia coli, the H1b scFv clones are capable of inhibiting  
 CC von Willebrand factor-dependent aggregation of platelets. The scFv  
 CC are composed of native human protein sequences and are therefore  
 CC attractive potential reagents for therapeutic purposes. They  
 CC provide a new class of antithrombotic agents, useful for the  
 CC prevention of platelet-dependent thrombi in diseased arteries,  
 CC bypass grafts, dialysis etc., and can also be used as diagnostic  
 CC reagents. Methods of inhibiting aggregation of platelets, of  
 CC binding human platelet GP1b alpha and of selecting a VH or VL  
 CC region of an antibody that inhibits platelet aggregation are  
 CC claimed. Fragments of the scFv VH or VL chain, including CDR  
 CC fragments, are also claimed.

 PS Claim 3; Page 37; 47pp; English.  
 XX  
 CC AAR8522-R88549 represent fragments of the Varicella-Zoster virus (VZV)  
 CC GE glycoprotein. This sequence represents residues 126-135 of GE.  
 CC These sequences are used to create antibodies against the VZV GE.  
 CC glycoprotein. GE is one of six glycoproteins encoded by the VZV genome.  
 CC From these six proteins, GE and GB are the major immunoreactive  
 CC glycoproteins. These sequences can be used for stimulating an immune  
 CC response against VZV infection. These peptides can also be used for  
 CC determining the presence of anti-VZV GE antibodies in a sample, and in  
 CC the diagnosis of VZV infection. The antibodies against these sequences  
 CC can be used for passive immunisation treatment, and in diagnostic  
 CC applications. This sequence contains the major VZV GE immunodominant  
 CC epitope and allows the development of products which can produce an  
 CC enhanced and broader immune response.

 PT Antibodies that bind antagonistically to osteoprotegrin binding  
 PT protein, useful for treating osteoporosis, metastasis of cancer to  
 PT bone, rheumatoid arthritis, hypercalcaemia of malignancy and  
 PT steroid-induced osteoporosis -  
 XX  
 PS Claim 14; Page 129; 239pp; English.

CC The invention relates to an antibody or antigen binding domain (or  
 CC fragment, variant or derivative), which binds to an osteoprotegerin  
 CC binding protein (OPGbp) and which is an antagonistic antibody.  
 CC The antibody or antigen binding domain may be administered to inhibit  
 CC osteoclast formation or activation, inhibit bone resorption in a mammal,  
 CC prevent or treat loss of bone mass in a mammal and to prevent or treat  
 CC tumour cell growth in bone. The loss of bone mass results from  
 CC osteoporosis, metastasis of cancer to bone, rheumatoid arthritis,  
 CC hypercalcaemia of malignancy and steroid-induced osteoporosis. The  
 CC present sequence is an antibody light chain variable region  
 CC complementarity determining region, CDR3, which can be incorporated into  
 CC an antibody/antigen binding domain of the invention.

XX Detecting papilloma virus infection using molecule binding to E4  
 PT protein - useful, e.g. in screening for pre-cancerous cervical  
 PT lesions and to determine type(s) of human papilloma virus infecting  
 PT human patients

XX Example 2; Page 17; 52pp; English.

XX A new method has been developed for detecting a papilloma virus infection  
 CC in an organism. The method comprises: (i) obtaining a sample of cells  
 CC from the potential infection site; (ii) contacting the cells with a  
 CC molecule binding specifically to papilloma virus E4 protein, and (iii)  
 CC monitoring the binding. The method is useful to detect papilloma virus  
 CC infections in organisms (especially mammals) and especially HPV  
 CC infections (e.g. with HPV16, 18, 33, 35, 45, 51, 56, 58 or 61) in humans.  
 CC Papilloma viruses cause epithelial tumours in humans varying in severity  
 CC depending on the infection site and HPV type involved. The method is

CC particularly useful to determine papilloma infection in the mammalian  
 CC cervix and especially to screen for pre-cancerous cervical lesions in  
 CC humans, since over 90% of cervical carcinoma patients show cervical HPV  
 CC infection. It is also useful to determine the type(s) of HPV infection in  
 CC a patient, by using a molecule binding specifically to a subset of HPV E4  
 CC proteins. This is important, since progression to malignant disease (and  
 CC hence clinical prognosis) is dependent on HPV type. Molecules capable of  
 CC binding E4 are also useful to target anticancer/antiviral agents capable  
 CC of destroying papilloma viruses and/or papilloma virus-infected cells.  
 CC The present sequence represents a synthetic immunoglobulin TVG 405 light  
 CC chain CDR3 peptide, from an example of the present invention.
